Charlene & George,

These two documents are likely the best overview of SpecFUEL. One is technical, the other more of a legal analysis that was done to answer OGC's questions. George, I know you have both of these, but Charlene, I didn't know if you had seen them. David Cozzie has everything that OSWER has. See you Thursday morning. By the way, it may be chilly in San Antonio. It is supposed to be rainy and cold tomorrow, clear up on Thursday, but the high will be in the low to mid-sixties. You might want to bring a light jacket.

Happy trails,
Kerry

Dear All:

Just a quick note to let all know that ORCR will try to join the SpecFUEL plant tour on Thursday. It will likely be George Faison or Ken Dixon or both. They have Eli's and my flight arrangements, (I'm attaching my itinerary) so I hope can get on the same flight into San Antonio. Everyone should wear comfortable clothes and flat shoes. WM will supply all the safety gear (hard hat, goggles, ear protection, safety vest) along with a safety briefing and a video overview of the process. Pictures are allowed, but we would like EPA to treat them as CBI. We have a nice camera at the facility, so we can also take pictures to supplement pictures taken by EPA and email them to you.

See you Thursday morning,
Kerry
